Here is a list of some claims that scientists have made over the years.

For each one, decide whether you believe it, whether you don't believe it, or whether you're not sure.

For each one, explain why you hold the opinion you do.

1. The Sun is a star.
2. This universe is just one of many in a big collection of alternative universes.
3. Your liver cleans your blood.
4. The universe started with a big bang.
5. Dinosaurs died out about 65 million years ago.
6. There is life on other planets.
7. Sugary drinks are bad for your teeth.
8. Life evolved.
